Sensitivity to lag, outage and qualifier rules

Cells: pair minus local skill, in percentage points of persistence-normalized log MSE.

All: Approved support. Clean: no qualifier on target or any required input.

Models share dates within each cell; qualifier rules can change the denominator.

Colour range fixed at −50 to +50 points: red (negative), white (zero), blue (positive).

No operational-vintage or measured sensor-cost benefit. Full cfs errors are retained separately.
